SUMMARY

Backend engineer with 5+ years building production Rust services end-to-end, on AWS infrastructure provisioned with Terraform. Track record of leading TypeScript-to-Rust migrations that halve compute footprint, integrating Web3 auth flows, and cutting AWS spend by 30%. Comfortable across backend (Rust, Go, Node), infrastructure (Kubernetes, Helm, Terraform), and the React UIs on top.

SKILLS

Languages: Rust, TypeScript, Go, Python

Backend: Poem (Rust), NestJS, Node.js, Gin, tRPC, gRPC

Infrastructure: AWS (ECS, RDS, ElastiCache, S3, KMS, SageMaker, Glue), Terraform, Kubernetes, Helm, Docker, ArgoCD

Observability & Testing: Grafana, Prometheus, Loki, OpenTelemetry, Thanos, CloudWatch, k6

CI/CD: GitHub Actions, Helm-based deployments, Terraform pipelines

EXPERIENCE

Kizzy Labs — Founding Engineer

Remote

May 2025 – Present

Web3 / iGaming

- Led TypeScript-to-Rust migration of the entire backend (Poem), serving the same workload on 50% fewer EC2/Beanstalk instances.
- Architected multi-environment AWS infrastructure in Terraform (ECS, RDS, ElastiCache, ALB, KMS, Secrets Manager) with environment isolation, automated pipelines, and audit-gated promotions.
- Designed and led an end-to-end iGaming supplier integration (schema, API, settlement) and shipped KYC + geofencing for regulated jurisdictions.
- Migrated authentication to Privy for unified Web3 SSO and integrated Relay for cross-chain deposits, letting users fund accounts from any chain.
- Stood up an MLOps platform from scratch: SageMaker domain with custom lifecycle configs, AWS Glue ETL, training/promotion pipelines, and a production inference API.
- Drove 30% AWS cost reduction across the account; introduced k6 load testing and CloudWatch-based observability/alerting to catch issues before release.

Shuriken — DevOps Engineer

Remote (Australia)

May 2024 – Feb 2025

Bare-metal Kubernetes / Web3

- Architected a 6-node bare-metal Kubernetes setup (3 prod, 3 staging) using Helm and ArgoCD, with GitHub Actions pipelines for microservice CI/CD.
- Built the observability stack (Grafana, Loki, OpenTelemetry, Prometheus, Thanos) covering 10 gRPC microservices and enabling long-term metric retention.
- Shipped a data analytics service on Metabase backed by PostgreSQL read replicas, isolating reporting load from production traffic.

Flash — Software Engineer

São Paulo, Brazil

Dec 2023 – May 2024

Fintech

- Built API + frontend for the back-office platform managing Brazilian *notas fiscais*, plus B2B partnership analytics dashboards on a NestJS + tRPC microservices stack.

Fingermark — Backend Engineer

Remote (New Zealand)

Mar 2023 – Dec 2023

B2B integrations

- Developed B2B integrations in TypeScript, Node.js, and .NET on Google Cloud (App Engine, Firebase, Pub/Sub), processing real-time data across multiple regions.

Infleux — Full-stack Developer

São Paulo, Brazil

Sep 2021 – Mar 2023

AdTech

- Built a push-notification system on AWS SNS + MongoDB for a React Native client; shipped OTA updates via CodePush and maintained a real-time conversions/clicks stream on Node.js + AWS Athena/RDS.
- Reduced cloud spend 8% by benchmarking EC2 instance types, tuning load balancers, and trimming CI/CD pipeline duration.

EDUCATION

Estácio — CST, Analysis and Systems Development

2024 – 2026

Federal University of Santa Catarina — B.A., Philosophy

2018 – 2022
